

DVL-1 Antenna installation and attention

1. Keep the metal rod and carbon rod away from the antennas(You can tape the antenna on the metal rod.)

2. Make sure no obstructions around the antennas

3. Attention:

- 1.Camera will block the signals.
- 2.Confirm whether there is motor or frequency interference source in PTZ.
- 3.feeder bending angle can not too large (less than 90°). For better transmit result, Suggest diagonal installation and no obstructions.

Below is the wrong installation:
